SUMMARY

Nine years of professional delivery, the last three and a half on production AI systems. Thirty-one repositories in active development: eleven internal platforms for a public foundation operating across 66 countries, twenty my own, from iOS apps to local model serving. Four services and nineteen scheduled jobs in production right now. Fully remote and asynchronous by default, across time zones. Open source contributor: 42 pull requests across 40 projects in the last two months, 18 merged, including repositories at 30k and 22k stars.

SELECTED IMPACT

- **48 of 109 sources were silently returning 404** while the pipeline reported success. Separating dead endpoints from empty results raised source response rate from 58 to 99 percent.
- **Four services and nineteen scheduled jobs in production.** Eleven internal platforms for a public foundation and twenty of my own projects, each wired into a real process, each with a gate that rejects bad output before it reaches a person.
- **A 37 GB model into 12 GB of VRAM.** Quantized a video model to w4a8 mixed precision so it fits a 16 GB consumer GPU, 35 percent faster than bf16, with a sha256 gate that catches corrupt downloads size checks miss.
- **CVSS 10.0 with a GHSA assigned.** Coordinated disclosure to a hardware vendor with 300,000 users produced seventeen findings, published with the full timeline.
- **Some requests were answered with no software at all.** The technology would not have paid for its own maintenance. Knowing which problems to solve with code is the same skill as knowing which ones not to.

TECHNOLOGY

Languages Python, TypeScript, JavaScript, Go, Swift, C#, Rust, SQL, Bash, PowerShell

AI and agents LLM APIs (Claude, Gemini, OpenAI), agent orchestration written against the raw APIs, retrieval-augmented generation with ChromaDB and sentence-transformers embeddings, Model Context Protocol, evaluation and output gating

Local model serving CUDA on a 16 GB consumer GPU, quantized inference (w4a8 mixed precision fitting a 37 GB model into 12 GB), PyTorch, HuggingFace Transformers and Diffusers, safetensors with sha256 verification, ONNX Runtime, Ollama, ComfyUI workflow APIs, Whisper, YOLO, TimesFM

iOS SwiftUI and UIKit, AVFoundation and PhotosUI camera pipelines, Core Image, Metal, on-device Core ML and Vision, ARKit and RealityKit, WidgetKit and Live Activities, StoreKit, Sign in with Apple, Keychain, XCTest, Xcode archive to signed IPA through the App Store Connect API

Desktop C# and WinUI 3 with XAML on Windows, MSBuild self-contained builds, Swift and AppKit on macOS, Electron

Backend and data FastAPI, Pydantic, Uvicorn, Express, NestJS, PostgreSQL (Postgres), SQLAlchemy, Prisma, SQLite, WebSockets, JWT auth, schema normalisation

Infrastructure Docker, Docker Compose, Linux, systemd (production service lifecycle) service units, nginx, AWS (EC2, S3), Google Cloud Platform (GCP), Tailscale across Linux, macOS and Windows nodes, Windows Scheduled Tasks, GitHub Actions CI/CD, Git

Quality and security pytest, Vitest, Playwright, ESLint, pre-commit hooks, SAST tooling, coordinated disclosure, observability and incident diagnosis

Adjacent, not yet shipped Kubernetes, Apache Airflow, LangGraph, Qdrant, Terraform, MLflow, Kafka. Same problem shapes I already operate with Docker, scheduled pipelines and hand-written orchestration.

SELECTED WORK

DshStudio Native client for a coding agent harness on three platforms: Swift on macOS and iOS, C# and WinUI 3 on Windows, same feature set. Streaming trajectory, approvals, background jobs, model sync without a rebuild. The Windows port was written from a Mac over SSH.

Sift github.com/kasparovabi/sift Session inspection tool. Found and closed a shell command injection in the session resume path, merged August 2026.

Security research kasparovabi.github.io/security-research Published coordinated disclosures with full timelines, including the findings a vendor never fixed.

Production automation portfolio Scheduled agent jobs across content pipelines, monitoring and reporting. Failure modes documented, recovery paths tested by triggering each one.

EXPERIENCE

AI Solutions Engineer (Consultant)
Apr 2023 - Present

Turkiye Maarif Vakfi, Istanbul

Internal platforms for the Directorate of Communications, a public foundation operating schools in 66 countries. Eleven platforms owned end to end, from the discovery conversation with the requesting team through delivery to the gate that decides whether a change ships. Institutional constraints are governance, procurement and data handling before they are technical. Alongside these, twenty of my own projects: iOS apps, local model serving on consumer hardware, and the agent infrastructure that runs them.

Producer and Photographer
Jun 2020 - Nov 2022

Creww Digital

Commercial production for ecommerce clients, working directly with client teams through brief, review and delivery.

Photographer
Jan 2018 - Apr 2020

Istanbul Governorship

Public sector visual communication.

News Editor
Feb 2017 - Jan 2018

Skala Media Solutions

Editorial and digital PR.

Languages Turkish native. English advanced.
